

CASE STUDY

Artificial Pond Waterproofing in sunny Portugal

MARISEAL·SYSTEM

Hotels all over the world compete with each other on design and prestige. Such prestige is offered by a decorative artificial pond by the hotel entrance.

This demanding waterproofing job was asked to be performed by our **MARISEAL SYSTEM**.

More specifically the products used for this job was the **MARISEAL 750** primer and the two component Polyurethane Waterproofing coating **MARISEAL 300**.

The **MARISEAL 300** is a liquid-applied, solvent-free, hard-elastic, cold applied and cold curing, two component polyurethane membrane used for long-lasting waterproofing and protection. Cures by reaction (cross linking) of the two components

Advantages of the MARISEAL SYSTEM® for water tanks:

- Certified for safe use in potable (drinking) water reservoirs.
- When applied forms seamless membrane without joints or leak possibilities.
- Resistant to water and frost.
- Maintains its mechanical properties over a temperature span of -30°C to $+90^{\circ}\text{C}$.
- Remains elastic even at low (frost) temperature.
- Full surface adherence.
- The waterproofed surface can be walked on.
